EXPERIENCE

UI/UX Designer & Gameplay Scripter, *CoreStudio (Roblox)*

FREELANCE | 2026

- Designed the game's UI/UX and wrote gameplay scripts in Luau
- Built a modular, server-authoritative anti-exploit system that catches speed hacks, teleporting, flying, jump cheats, humanoid tampering and remote spam
- Added an admin dashboard, saved bans, Discord webhook alerts, and a strike system that kicks and then bans repeat offenders

Server Admin & Plugin Developer, *BattleAsya (Minecraft)*

PART-TIME | 2019 - 2022

- Helped run a server with about 14,000 players and up to 5,000 online at once
- Built custom Java plugins on the Spigot API, including a report and ticket system that opens Discord ticket channels through a JDA and DiscordSRV bot; the server still uses it today

PROJECTS

Baylo: Community Bartering Platform (Capstone) — *React, TypeScript, Tailwind, FastAPI, PostgreSQL, Firebase, Gemini API, Docker, Google Cloud Run*

- Built the web platform and backend on my own in a 4-person team, while three teammates built the mobile app: FastAPI with 9 route modules over a 13-table PostgreSQL database, and a React, TypeScript and Tailwind frontend
- Connected the web platform to the mobile app through a shared backend and Firebase, so accounts, listings, chat and notifications match on both
- Added Gemini to estimate item value and category from photos, screen prohibited listings, and score trade matches; deployed the backend to Google Cloud Run with Docker
- Led the ISO/IEC 25010 evaluation: 100 respondents rated the platform 4.89/5

Lakbay Lokal: Trip Planner for the Philippines (in progress) — *Python, FastAPI, JavaScript, SQLite, Gemini API, Leaflet, Render*

- Building a planner that turns where a traveller is staying into a timed day of local stops, with travel time between each
- Wrote the planning engine: it filters ~220 real places by budget, group, opening hours and interests, then scores them; Gemini only rewords stored facts
- Added editable plans, a rainy-day swap, maps, calendar exports and an offline day guide; covered the engine with unit tests

Wildwood: 3D Browser Game and Website — *three.js, JavaScript, GSAP*

- Designed and built a cozy 3D game where players earn an animal's trust instead of catching it, then farm by day and defend against wolf raids at night
- Built its website so players get the feel of the game before they press Play, with a 3D forest scene, field guide and world map

EDUCATION

Far Eastern University - Alabang, *BSIT - Web and Mobile Applications*

FOURTH YEAR | EXPECTED GRADUATION: SEPTEMBER 2027

Colegio de San Juan de Letran - Calamba, *S.T.E.M*

2021 - 2023

SKILLS

- **Full Stack Development**
- **Web & Mobile Application Development**
- **AI & Machine Learning**
- **System Design**
- **UI/UX Design**

LANGUAGES

Python, TypeScript, JavaScript, Java, Kotlin

FRAMEWORKS & TOOLS

React, Vue, Nuxt, Tailwind, three.js, GSAP, FastAPI, Node.js, Firebase, TensorFlow, OpenCV

CERTIFICATIONS

- **Cisco CyberOps Associate** *(July 2026)*
- **IT Specialist: Networking, Certiport** *(March 2025)*
